Sothat Thoeung

IT Specialist & Junior Systems Administrator

Cambodia | sothat@sothatthoeung.com | sothatthoeung.com | github.com/sothatthoeung | linkedin.com/in/sothatthoeung

PROFESSIONAL SUMMARY

Practical IT Specialist focused on Microsoft 365 administration, Entra ID access control, Cloudflare DNS management, and Windows/Linux system operations. Experienced in building hands-on infrastructure labs, troubleshooting mail routing and TLS/SSL issues, and authoring structured operational runbooks and root-cause analyses (RCA) on GitHub to ensure repeatable fixes.

TECHNICAL SKILLS

Domain	Technologies & Operational Competencies
Cloud & Microsoft 365	Microsoft 365 Admin Center, Exchange Online Mailbox Provisioning, License Administration, Custom Domain Onboarding
Identity & Security	Microsoft Entra ID, Multi-Factor Authentication (Microsoft Authenticator), Role Separation & Least-Privilege Access
Networking & DNS	Cloudflare DNS, MX / SPF (`-all`) / CNAME Autodiscover Records, TLS/SSL Modes, TCP/IP, DHCP, UFW Firewall
Systems & Virtualization	Windows 10/11 Administration, Ubuntu Server, File & User Permissions, Proxmox VE Basics, PC Hardware Troubleshooting
Documentation & Tooling	Operational Runbooks, Root-Cause Analysis (RCA), Standard Operating Procedures (SOPs), Git, GitHub, Cloudflare Pages, Markdown
Languages	Khmer (Native), English (Working Proficiency — Technical Reading & Documentation)

HANDS-ON EXPERIENCE & TECHNICAL LABS

Cloud & Systems Administration (Home Lab)

2026 – Present

Independent Lab Environment, Cambodia

- Set up and administered a Microsoft 365 Business Basic tenant for `sothatthoeung.com`, keeping the Global Administrator account unlicensed and separated from the daily `sothat@` user mailbox.
- Configured MX, SPF (`-all`), and Autodiscover CNAME records in Cloudflare with proxy disabled (DNS-only) to maintain reliable inbound and outbound Exchange Online mail flow.
- Enforced Multi-Factor Authentication (MFA) via Microsoft Authenticator in Entra ID to protect administrative and user sign-ins.
- Authored step-by-step troubleshooting runbooks on GitHub after resolving live setup issues including OWA 500 mailbox provisioning delays and Cloudflare SSL redirect loops.

IT Infrastructure & Linux Self-Study **2025 – 2026**

Personal Lab Environment, Cambodia

- Practiced Linux server administration on Ubuntu and Proxmox VE, focusing on user permissions, UFW host firewall rules, and local network configuration.
- Managed technical documentation and web source files using Git and GitHub, deploying automated updates through Cloudflare Pages.

FEATURED TECHNICAL PROJECTS

IT Runbooks & Technical Knowledge Base **GitHub Repository**

github.com/sothatthoeung/it-runbooks — *Microsoft 365, Exchange Online, Cloudflare DNS, Markdown*

- Created a structured operational repository documenting symptoms, root causes, exact remediation steps, and verification checks for recurring infrastructure issues.
- **KB-001:** Documented resolution workflow for Exchange Online `OwaUserHasNoMailboxAndNoLicenseAssigned` HTTP 500 errors following license assignment.
- **KB-002:** Documented remediation steps for Cloudflare Flexible/Full TLS encryption conflicts and DNS proxy routing with GitHub Pages custom domains.

Custom Domain Email & Portfolio Infrastructure Setup **Live Production**

sothatthoeung.com — *Microsoft 365, Entra ID, Cloudflare DNS & Pages, Git/GitHub, HTML/CSS*

- Integrated custom domain verification, Exchange Online mail routing records, and static web hosting under a single custom domain without service conflicts.
- Established a Git-based workflow where commits pushed to the `main` branch automatically deploy to production via Cloudflare Pages.
